Primavera Unifier: uDesigner Fundamentals 9.13

Duration: 4 Days

What you will learn

This Primavera Unifier: uDesigner Fundamentals training enables you to design business processes, attribute forms and shells. Expert Oracle University instructors will help you develop the knowledge and skills to make effective design decisions that will transform designs into a functioning user interface.

Learn To:

Follow good design practices.
Distinguish process types.
Create data structures, shells, business processes and attribute shells.
Import public business processes from other uDesigner environments.
Build data structures.

Day 1: Overview
This course begins with an overview of navigation, basic features and user administration in uDesigner. It introduces design and development concepts.

Day 2: Engage in Hands-On Exercises
Next, you will gain hands-on experience designing and building commonly used examples of Simple, Line Item, Text and Document business process types. You will also learn how to re-use forms.

Day 3: Explore Workflow Functionalities
You will learn about additional workflow functionality, such as conditional routing and sub-workflows, building formulas and validation.

Day 4: Form Functionality & Integration
You'll review form functionality, including line item consolidation and reset. Finally, you will learn about integration, versioning and portal-enabled business processes.

A Live Virtual Class (LVC) is exclusively for registered students; unregistered individuals may not view an LVC at any time. Registered students must view the class from the country listed in the registration form. Unauthorized recording, copying, or transmission of LVC content may not be made.
